

EnterpriseInsight™'s Pandemic Frameworks

Monitor wellness and productivity

EnterpriseInsight™, the SaaS solution for managing enterprise risk, has the answer for these uncertain times — Pandemic Workforce Monitor (PWM). The web-based software solution enables your management team to monitor the wellness and productivity of your entire workforce.

EnterpriseInsight™ PWM quickly assesses multiple factors during a pandemic, such as how well employees work remotely.

- The software offers assessments based on department or work type. You can assess the success of each department's employees:
 - Are they keeping up with previous benchmarks?
 - Do they have connectivity issues or distractions?
 - Is their wellness affecting their work?
 - What is their level of adjacent wellness — do they live with someone who has a high-risk job, such as a registered nurse?

EnterpriseInsight™ PWM's assessments help department heads make informed, strategic business decisions based on accurate, up-to-date information. These insights allow you to weigh the importance of operations against one another and assign financial and technological resources to struggling areas and departments. Get the peace of mind that your employees and business have what they need to work through the crisis.

EnterpriseInsight™ PWM features:

- Offers quick and easy setup
- Includes **pre-built assessments** covering common factors that impact remote employees during a pandemic
- Provides **automated scoring** across your business
- Facilitates the identification and **remediation of root causes** for productivity bottlenecks
- Delivers simple, comprehensive reports and framework scorecards.

EnterpriseInsight™ Enterprise Pandemic Preparedness (EPP) Helps Plan For Any Contingency

The coronavirus (COVID-19) has been an overwhelming challenge for businesses around the world. Take this opportunity to inventory the tools and processes you currently have in place and formulate best practices for the future. Let EnterpriseInsight™ help you prepare for the next crisis.

The pandemic risk management software solution helps you plan for any contingency. The software examines the resources that are available and required for your business to run, including:

- ✓ People
- ✓ Network Connections
- ✓ Hardware
- ✓ Information
- ✓ Software
- ✓ Physical Resources

EnterpriseInsight™ EPP provides a preparedness score for each area of your business — making it easy for you to see your position for the next pandemic outbreak. The score allows you to assess your resources and ask questions like:

- ✓ Will you need to rely on a vendor to pick up the slack?
- ✓ Do you need multiple vendors for supplies/services?
- ✓ Are there alternative plans/workarounds to avoid relying on vendor

Explore EnterpriseInsight™

EnterpriseInsight™ is the next-generation solution for managing enterprise risk across your organization and processes with unprecedented ease and insight. By leveraging its pre-built enterprise risk templates, you'll be able to quickly conduct risk assessments of your organization, processes, products, applications, and EnterpriseInsight™ EPP can provide a score to show how prepared your organization is for a pandemic.
